___ American Buildings Survey

- (A) St. Vincent's Hospital Complex, which includes this structure, was founded in 1849 by the Sisters of Charity of St. Vincent de Paul. 3t. Vincent's is the third oldest, and the oldest Catholic, hospital in N.Y.C. The Great Depression, beginning in 1929, brought with it the need for an expanded role for St. Vincent's. As more and more people were in need of free medical service, the construction of the new Lowenstein Center in 1930 helped to fill an important void in city health care. This building is also part of the 65 block Greenwich Village Historic District.
- (B) White stone covers the entire first floor, and is used as surrounds for the second floor windows. The rest of the evenly spaced windows are cordered by more simple common cond orick, and have plain stone sills. A stone lintel runs the width of the building above the sixth floor. At the three central bays, this band is replaced by three large stone lintels with carved inset panels. The central entrance of this building rises to the second floor, and includes the second floor window of that bay. This entrance projects from the building line and is made of the same white stone as that of the first floor. The second floor window which is included in this projection is flanked by stylized bas-relief designs.
